

Project Pumpkin!

In the spring of 2019, the Garden Club (Ms. Foster, advisor) obtained soil and used a rototiller to create 43 mounds for pumpkins to be planted in the courtyard. During the last week of school in June, homeroom students came down to plant their pumpkin in a mound and put a stake with their HR name on it, indicating where they planted. Summer school students watered the plants and tended to their needs.

What's next?

The Garden Club would like to create gardens for seasonal planting of crops/flowers. We also will be working on composting, irrigation and designing year round gardens for the school. The Garden Club students' desire is to connect with any classes or individuals that would like to be involved with this project and to connect with the Merrimack community.
